

Rif. EURES Sud Francia (ogni mansione ha il riferimento da indicare nell'oggetto dell'email)

Geoscience and Engineering Opportunities

Vermilion Energy Trust is an entrepreneurial E&P company, headquartered in Calgary, with assets in Canada, Australia, France, the Netherlands and Ireland and daily production of 30,000 boe/d. Vermilion operates over 90% of its assets in France and are now looking to establish their European Geoscience and Engineering team bases in their office 80km south of Bordeaux, to work as an integrated team focusing on exploration and exploitation of new and existing assets.

South West of France

Attractive Packages

Senior Reservoir Engineer

In three newly created roles responsibility lies in reservoir engineering activities on specific assets in the French and Netherlands portfolio, including production and recommending further development options. Coordinate simulation studies, reserves reporting, be involved in the valuation of assets for potential acquisition and actively support the new ventures team.

(Reference : VERMIL 04.10-1)

Senior Geophysicist

In two newly created roles, the brief is to analyse, interpret, question and evaluate regional and basin data across the French and Netherlands portfolio with responsibility for seismic interpretation bringing forward exploitation and development prospects.

(Reference : VERMIL 04.10-2)

Senior Geologist

In three newly created roles, working on the key areas of exploitation and exploration across the European portfolio, the positions will provide geological input to prospect generation and will manage the Drilling Portfolio Inventory, maximising potential from the portfolio and actively pursuing new ventures.
